Note:

1. 
$$V_{\rm H} = V_{\rm H-M} - V_{\rm os}$$

In which  $V_{\text{H-M}}$  is the Output Hall Voltage,  $V_{\text{H}}$  is the Hall Voltage and  $V_{\text{os}}$  is the offset Voltage under

the identical electrical stimuli.

#### Criteria:

- Variation of Hall Voltage  $V_{\rm H}$  and input/output resistances  $\emph{R}_{\rm in/out}$  are less than 20%.
- Variation of offset voltage  $V_{os}$  is less than  $\pm 16$ mV.
- Other parameters in **Table 1**. are still within their ranges stated in **Table 1**.

## **Soldering Conditions**

The following conditions should be preserved. Solder ability should be checked by yourself, because it is depend on solder paste material and other parameters.

#### Material of solder flux

- Use the resin based flux and refrain from using organic or inorganic acid based and water-soluble one.

#### Cleansing of solder flux conditions

- Use Ethanol or Isopropyl alcohol as cleansing material.
- Process temperature should be 50 °C or less.
- Duration should be 5 minutes or less.

#### Hand soldering conditions

- Apart from the mold resin more than 1mm.
- Solder at temperature 300 °C for less than 5s.

#### Wave soldering conditions

- Temperature in Pre-heating zone should be lower than 150°C.
- Temperature in Soldering zone should be lower than 280°C.

#### **Precautions for ESD**

This product is the device that is sensitive to ESD (Electrostatic Discharge). Handling Hall Elements with the ESD-Caution mark under the environment in which

- Static electrical charge is unlikely to arise (Ex: Relative Humidity over 40%RH).
- Wearing the anti-static suit and wristband when handling the devices.
- Implementing measures against ESD as for containers that directly touch the devices.

## **Precautions for Storage**

- Products should be stored at an appropriate temperature and humidity (5°C to 35°C, 40%RH to 60%RH) after the unsealing of the MBB. Keeping products away from chlorine and corrosive gas.
- For storage longer than 2 years

Products are sealed in MBB with a desiccant. It is recommended to store in nitrogen atmosphere with MBB sealed. Oxygen and  $H_2O$  of atmosphere oxidizes leads of products and lead solder ability get worse.

# **Precautions for Safety**

- Do not alter the form of this product into a gas, powder or liquid through burning, crushing or chemical processing.
- Observe laws and company regulations when discarding this product.
